

INCLUSIVE YOUTH FOOTBALL

Acronym: IN YOUTH FOOTBALL

Co-funded by the
European Union

TOPICS

1. ASSESSMENT OF BIOLOGICAL MATURATION
2. KHAMIS-ROCHE EQUATION
3. EXPLANATION EXCEL SHEET

1. Assessment of biological maturation

- To measure the biological maturation, we proposed the **Khamis-Roche equation**.

REFERENCE:

Khamis, H. J., & Roche, A. F. (1994). Predicting adult stature without using skeletal age: The Khamis-Roche method. *Pediatrics*, 94, 504–507 (erratum in *Pediatrics*, 95, 457 [1995] for the corrected version of the tables)

- The protocol has been utilized by **several academies within the Premier League**.

Khamis-Roche equation*

Predicts adult stature from:

- Age
- Height
- Weight
- Mid parental height

Collecting these
variables

IMPORTANT INFORMATIONS FOR DATA COLLECTION

- Ensure that players do not wear personal items, such as bracelets, rings, or watches.
- Conduct the assessment of height and weight while the players are in minimal clothing.
- When measuring height, align the Frankfort plane, which involves positioning the trignon and orbital anthropometric points properly. Refer to the figure below for guidance.

Figure 1. Alignment of Frankfort plan.

2. Khamis-Roche equation

- **Predicts adult height** from age, height, weight, mid parent height (adjusted for overestimation)**

$$\text{PREDICT ADULT HEIGHT} = \text{Intercept} + (\beta_1 \times \text{height}) + (\beta_2 \times \text{weight}) + (\beta_3 \times \text{mid-parent height})$$

- The **bold terms** in the equation represents **sex** and **age specific coefficients**.
- We are already familiar with these terms, so we just need to introduce **height, weight, and mid-parent height**.

Epstein, L. H., Valoski, A. M., Kalarchian, M. A., & McCurley, J. (1995). Do children lose and maintain weight easier than adults: a comparison of child and parent weight changes from six months to ten years. *Obesity Research*, 3(5), 411–417.

VIDEO EXAMPLE

CONCLUSION

**ORGANIZE THE PLAYERS INTO THREE
BANDS:**

- 80 to 85% of adult height
- 85 to 90% of adult height
- 90 to 95% of adult height

**THANK YOU FOR YOUR
ATTENTION**
